PANKAJ BORI

Bengaluru, India | pankajbori491@gmail.com | +91-9864721416 | linkedin.com/in/pankaj-bori | github.com/Pankaj-Bori

PROFILE

Computer Science graduate with a strong foundation in C++, object-oriented design, and data structures and algorithms. Experienced in designing and debugging software through project work, with a top 9% rank among 21,000+ competitive programmers on CodeChef. Contributed system design, documentation, and cloud work to a team-built AI-integrated project. Seeking a Software Engineer role to design, build, and maintain reliable software.

SKILLS

Core Languages: C++, C, Python, Java, SQL — comfortable across OOP and procedural styles

Systems & Networking: Multithreading, PCAP, TCP/UDP, CMake

Web & Frameworks: Html, Css, JavaScript, Node.js, Express, Vite

Databases: MongoDB, SQL

Cloud & DevOps: AWS, Azure, Docker, Kubernetes

Practices: Agile workflows, REST API design, test design & automation (Coursera-certified), Git/GitHub, debugging

PROJECTS

SafeRoute – Smart Attendance & Transport Management System (Team Project) Jan 2026

- Designed the system architecture of a team-built attendance and transport platform, separating UI, business logic, backend services, and AI integration into independently testable modules to simplify troubleshooting and debugging.
- Designed a hybrid rule-based + generative-AI (Gemini) fallback for transport-delay notifications, achieving zero missed parent alerts in testing.
- Specified AI-assisted, explainable risk summaries generated from attendance data, reducing administrators' manual review effort.
- Authored documentation for the complete project and took the lead on its cloud component, coordinating design and testing decisions with teammates through regular check-ins.

Tech: React, TypeScript, Node.js, Express, MongoDB, Gemini API | github.com/Pankaj-Bori/saferoute-smart-attendancetransport

Deep Packet Inspection & Traffic Filtering System Oct 2026

- Engineered a multithreaded DPI pipeline for PCAP traffic analysis with Ethernet/IPv4, TCP/UDP parsing, 5-tuple connection tracking, load balancing, Fast Path processing, and application classification.
- Implemented TLS SNI, HTTP Host, and DNS inspection with configurable IP, application, domain, and port-based filtering and FORWARD/DROP decisions.
- Validated the system on 77 packets, processing all packets successfully and verifying YouTube application blocking and domain filtering through controlled PCAP tests.

Tech: C++17, CMake, PCAP, Multithreading

CERTIFICATIONS

- **Software Testing and Automation Specialization** — Coursera, Dec 2025: test design, test planning, and automation fundamentals
- **Cloud Computing** — NPTEL, Apr 2025
- **Approximation Algorithms and Linear Programming** — Coursera, Apr 2024

ACHIEVEMENTS

- Ranked top 9% of 21,000+ competitive programmers (CodeChef Starters 211, Div 4, Nov 2025), solving algorithmic problems under contest time pressure.
- Selected for Deloitte Australia's Data Analytics Job Simulation (Forage, Aug 2025): built a business-classification dashboard in Tableau from raw forensic data, using Excel for categorization.

EDUCATION

Lovely Professional University, Phagwara, Punjab Graduated: July 2026

B.Tech, Computer Science & Engineering | CGPA: 6.13

Relevant Coursework: Data Structures & Algorithms, OOP, Cloud Computing, Approximation Algorithms
